

SAFETY POLICY

Safety is an integral part of GT's Oilfield Hauling (GT's) operations and is there to protect our employees, clients, contractors, the environment and the public. We will maintain and enhance a company wide organizational structure and culture that recognizes and encourages the full and active participation of all employees in the systematic management of health, safety, and environmental issues. We will also enhance a culture that allows for the transfer of information and best practices across all levels of GT's.

Management at all levels is responsible for ensuring that operations are conducted in accordance with this policy and that appropriate health, safety, and environmental programs, procedures and systems of work have been developed and implemented for each operation under their supervision.

We will develop, implement and continuously improve effective health, safety, and environmental management systems and develop standards that reflect best industry practices.

We will ensure that potential health, safety, and environmental risks associated with all our activities are assessed as early as is practicable in order to minimize and manage adverse effects and to identify opportunities for improvement. GT's will strive to eliminate or manage any foreseeable hazards, which may endanger health, safety or the environment.

We will operate to standards that will comply with the requirements of appropriate federal, provincial and local governments. GT's will strive beyond compliance and recognize these principles as a valued way of life. Where no regulatory controls exist, we shall adopt and impose our own health, safety, and environmental standards in accordance with relevant industry standards of practice.

Training is an essential element of HSE excellence. GT's is committed to provide training and development on health, safety, and environmental matters that is appropriate to each employee's job duties and responsibilities. The management of each group shall take steps to assure that appropriate training is conducted on a regular basis.

GT's believes that effective HSE management is good business. As in other areas of our business, GT's is committed to continuous improvement of HSE management practices. Effective management requires on-going assessment and review to determine whether the health, safety and environmental policies are being appropriately implemented. Accordingly, an on-going assessment, self-evaluation and audit program shall be implemented and maintained for operations throughout GT's.

A handwritten signature in blue ink, appearing to read 'Greg Toews', is written over a horizontal line.
